

For rebates that lower your running costs and help the environment

Incentives for car parks

The City of Adelaide's sustainability incentives contribute to making your building cheaper to run and position your facility to capture opportunities with electric vehicles.

Rebates are available for projects that help you to install electric vehicle charging stations, generate, manage and share electricity, improve your building's energy performance, reducing costs and carbon emissions.

Whether you're already on the sustainable path or you're just getting started, the City of Adelaide supports initiatives that benefit owners, tenants and the environment. We're building on our foundation of thoughtful innovations with a commitment to grow our city to be sustainable for future generations.

Visit our website for the full range of sustainability incentives and eligibility criteria.

Solar PV systems

Electric vehicle charging

Electric bike charging

Energy storage

Electricity load control

Rainwater tanks

Play your part and make Adelaide a carbon neutral city.
